

Revamp - Keyword selection User flow analysis

Observations

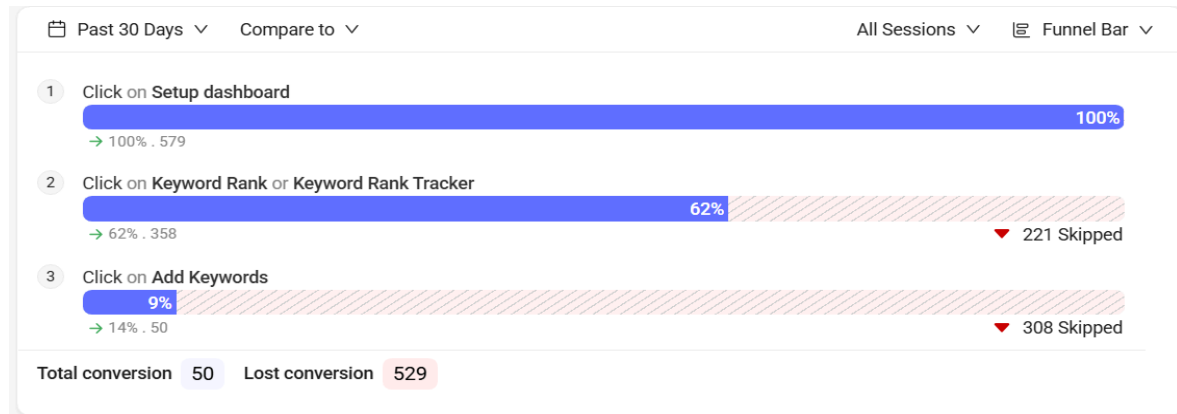

- After onboarding, users who attempt to add keywords manually or use suggested ones **perform significantly below average** in the keyword exploration phase.
- Due to **limited understanding of high-impact keyword selection**, users often fail to achieve meaningful rank improvements.
- While users actively explore the **Keyword Research** feature, they **struggle to add those keywords for tracking**.
- The tool **currently works well in English** but lacks usability for **non-English languages** like Chinese, Japanese, and Korean.
- Users are **mostly copying the keyword results** in keyword research but we **don't know where or how they use them**.

Analysis for Last 30 Days – User Analytics Summary

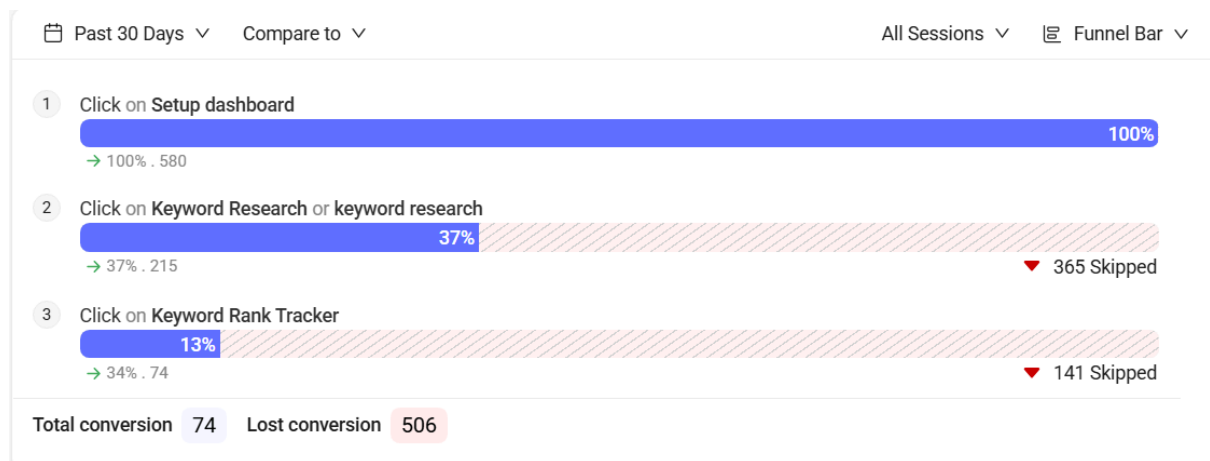

- **Total Users: 508**
 - **100% (508)** added their app (dashboard setup)
 - **202 users (39.7%)** visited the Keyword Research page
 - **70 users (13.8%)** clicked “**Add Keywords**” to input their own
 - **Only 7 users** clicked “**Track Rank**”, and **just 3** users successfully tracked a keyword

202 user explored keyword research but they did not select keyword to track rank

Funnel analysis for - Set up dashboard >> Visited keyword Research >> Added keywords

⚠ Problem Statement – Keyword Research & Tracking

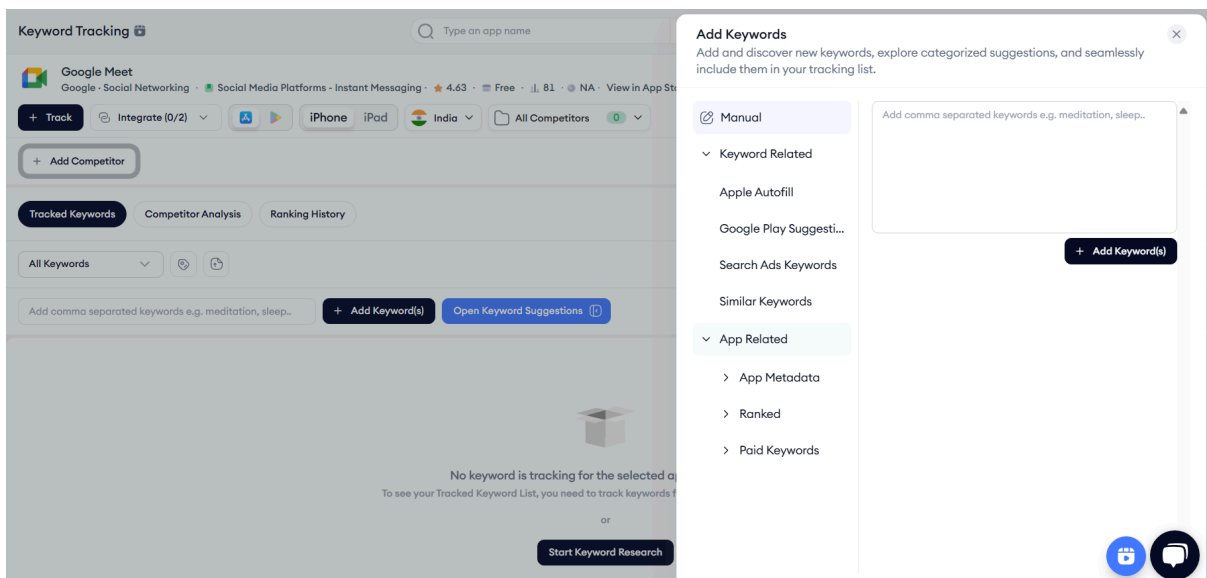

- Users explore keyword research but **mostly copy results** without tracking — and there's **no visibility** on how they use those keywords.
 - The tool **lacks multilingual keyword research support in broader level link english language**, affecting usability in key global markets.
 - Keyword suggestions **lack insights** like Search Volume, Difficulty, and Visibility — these are **in development**.
-

💡 Solution – Recommendations on Keyword Research & Tracking

Keyword selection box on top and keyword rank tracker on button - apttweak, mobile action, appfollow, appdesk follow this method.

Mobile action has changed the keyword selection - keyword suggestion from side modal

1. Keyword Selection Box

Introduce a **centralized Keyword Selection Box** inside **Rank Tracker, Keyword Pulse, and Trends** — similar to what competitors

Key Features to consider. (already we have auto suggestion which is not performing well

Above all

- **Bulk Select Support:**
 - Include a “**Select All**” option on each feature
 - If selected keywords exceed the **25-keyword limit**, show a **smart upgrade popup**

This box will act as a **universal keyword selection hub** across all keyword-related features.

Selected keywords will be **auto-added to the Rank Tracker** for immediate tracking.

2. Personalized Keyword Offers (Lead Generation)

Add conversion-focused CTAs inside the Keyword Selection Box:

- **Option 1:** “Get in touch for personalized keywords”
- **Option 2:**

“ 100 personalized keywords ready to grow your app — Click here to get them.”

- Acts as a lead magnet and encourages engagement and conversion

3. Include keyword research on the keyword selection container

- Allow user for some credit and ask for upgrade

Initial A/B testing method

Placing current keywords selection container on the rank tracker (remove add keyword)
Keyword management will be handled by the table (i.e delete).
