

SUMMARY

UX Designer with 5+ years of experience in versatile project from seo/aso tools and nextgrowthlabs project which is India's top 10 SEO/ASO agency, working closely to the CEO. My core involvement in UX design with session analysis, PLG funnel analysis, user behavior analysis with metrics to lead every design decision which move the needle on our key growth overall. Takes full ownership in research led design planning. Expert in AI product designing for our new seo tool.

WORK EXPERIENCE

Nextgrowth Lab · Multivariate AI

Mar 2021 – Present · Bangalore

AppVector

ASO Analytics Platform

- ASO analytics platform helping app publishers optimise App Store & Play Store rankings — owning all feature modules end-to-end and reporting directly to the CEO.
- Analysed 1,004 new-user sessions via OpenReplay + SQL; identified 2 screens responsible for **88% of first-session drop-off**.
- Redesigned onboarding flow — completion rate improved from **14% to 37.5% (+165% uplift)**.
- Redesigned Chrome extension token copy flow and install-to-activation journey — **2,259 installs in 30 days**; token activation lifted from **22.3% to 43.2% (+94% uplift)**, converting high-intent users into paying AppVector clients.
- Consolidated 7 fragmented keyword-selection patterns into one unified flow — **+54% keyword engagement**.
- Redesigned pricing, invitation, and team workspace flows through competitor analysis — removing friction from the subscription journey drove **92 trial sign-ups within one month**.

SearchVector

B2B SEO Intelligence Platform

- UX Designer on B2B SEO platform through its AI migration — inherited 8 broken tools with zero handoff docs; redesigned all end-to-end and shipped **9 feature modules** before launch.
- GSC connection redesign → impressions **2.5× in week 1**.
- Redesigned the entry-point dashboard into a **3-state progressive disclosure system** (Demo → Added → GSC Connected) — post-migration audit flagged zero state differentiation; rebuilt to guide users from first visit to fully live without any support required.
- Authored AI-UX SOP during product's AI migration — streaming output states, latency feedback, and fallback flows — now the team's standard reference across all AI feature builds.
- Conceived NGL-AI — proposed a single pipeline consolidating daily OpenReplay friction signals into a morning UX summary pushed to team chat, replacing manual session triage.

Hiring Tool

Audio-based Candidate Screening

- Internal async audio screening product — dual-sided interface (candidate + recruiter) covering Website, Mobile Web, and Mobile App; built to replace 30+ live phone interview sessions per week.
- Replaced 30+ weekly live interview sessions — shipped the full product end-to-end in **2 weeks**.
- Drove **3,285 invites sent, 399 completed interviews, and 35% acceptance rate (2× industry benchmark)**.
- 500+ recruiter hours saved** per hiring cycle by eliminating manual phone screening.
- Applied Hick's Law and mobile-first principles; ran 3 rounds of usability testing before production handoff.

NextGrowthLabs

Chrome Extension · Blog · Localisation

- Distribution-layer UX across Chrome extension, SEO blog, and JP/KR/CN localisation — pushed GSC impressions from **75K → 180K (2.4×)** over the same period.
- Chrome Extension — redesigned token copy flow and install-to-activation journey; **2,259 installs** in 30 days, activation rate **22.3% → 43.2% (+93.7% lift)**.
- Blog — designed SearchVector's SEO blog layout for dwell time, internal linking, and crawlability; a direct driver of the impression growth.
- Localisation — coordinated JP, KR, CN market localisation of landing pages, app store screenshots, and extension listings with CJK layout optimisation.
- Designed complete store presence for **5+ client apps** — icons, screenshots, promo graphics, and video.

PERSONAL PROJECTS

TripAI — AI Travel Planner

Android + Web · 2024

➔ Live: [praveen-resume.vercel.app](#)

- Designer and builder — zero to live in **4 days, ₹0 budget**.
- Ran 5 field interviews; all **3 personas built from real data** — not AI-generated.
- Designed end-to-end trip planning flow: onboarding → hotel discovery → AI itinerary generation → trip summary — each screen UX-validated before handoff.
- Hotel ranking engine: **100+ properties** scored by location, recency, and relevancy — powered by **Claude API + Gemini API + Google Places API**.
- AI-first UX: streaming output indicators, latency states, and graceful fallback flows on every AI-powered screen.
- Shipped on **Android + Web** via Expo — full IA, wireframes, interactive prototype, and developer-ready handoff in one sprint.
