## SUMMARY

- 5 years leading UX across 3 internal SaaS products and 15+ client ASO projects at India's top-10 SEO/ASO agency — partnering directly with product, engineering, and leadership to ship research-grounded design end-to-end.
- Every redesign starts with finding where users actually stop — not where we assume they do. On AppVector, two screens caused 88% of new-user drop in session one; I identified and fixed them in under a week.
- I stay through the full build: research, IA, wireframes, Figma specs, engineering QA, post-ship metric review. The work isn't done at handoff.

## HIGHLIGHT PROJECTS & WORKOUTS

### UX Designer — Multivariate AI · Nextgrowth Lab

Mar 2021 — Present

India's top-10 SEO/ASO agency · Sole UX designer · Bangalore

#### 1. AppVector — B2B ASO Analytics Platform

- Led end-to-end UX research and product design for the analytics suite, auditing 1,004 user sessions to identify friction and streamline complex search-data visualisations.
- Doubled onboarding completion rate (14% to 37.5% in one week) by replacing a blocking 3-step setup gate with an automated demo-first preview dashboard.
- Boosted Chrome extension activation by 94% (22.3% to 43.2%) and expanded user base to 337 by redesigning the credentials page with live previews of unlocked features.

#### 2. SearchVector — B2B SEO Platform (Ahrefs / Semrush competitor)

- Spearheaded platform-wide UX audit and product redesign for 8 core SEO modules post-codebase migration, correcting broken interactions and missing empty states.
- GSC connection: instead of asking users to connect before showing them anything, built a page showing 4 specific things they'd unlock, driving a 2.5× lift in organic impressions.
- Authored the company's AI-UX SOP defining output streaming states, latency feedback patterns, and fallback flows adopted as the team standard across all AI feature builds.

#### 3. Nextgrowth Lab — Client Work & Internal Platforms

- Managed UX strategy and creative asset design for 15+ client mobile apps, optimizing Play Store listing visuals to boost first-scroll conversion rates.
- Designed a zero-live-call async screening platform (candidate mobile audio recorder and split-viewport recruiter dashboard) that saved 500+ coordination hours.
- Conducted accessibility and multi-language/RTL design audits while standardizing templates to eliminate design-to-development handoff delays.

#### 4. TripAI — AI Travel App (Personal UX Experiment)

- Conducted user research and end-to-end UX design for a sentiment-aware travel engine, converting unstructured reviews into queryable traveler interest tags.
- Designed cognitive latency-buffer animations, progressive loading states, and skeleton UI to manage LLM API wait times and reduce user anxiety.

## SKILLS & TOOLS

### DESIGN CRAFT

- Information Architecture
- Design Systems (Figma)
- Wireframing & Prototyping
- Usability Testing

### RESEARCH & DIAGNOSTICS

- Heuristic Evaluation
- Behavioral Diagnostics
- Session Analysis (OpenReplay/Clarity)
- PLG Funnel Analysis

### TOOLS & ANALYTICS

- A/B Testing & SQL for UX
- Figma & Adobe Suite
- PostHog & Clarity Analytics
- AI Prototyping (Claude/Gemini)

## EDUCATION & CERTIFICATION

UI/UX Design Certification — Designboat, Bangalore

2021

Master of Business Administration (MBA) — Coimbatore

2016

Bachelor of Engineering (B.E.) — Sastra University, Thanjavur

2014
